

Guest Lecture

Physician/Scientists-Medical Gladiators in the Arenas of Medicine and Science: Tips for Surviving and Thriving in Academic Medical Centers

by Professor Dr Paul Barach, BSc, MD, MPH, Maj (RET.)

Thomas Jefferson University, Philadelphia, USA

Sigmund Freud University, Vienna; Medical University of Graz, Graz

Academia is a world on its own with many hidden rules that can be confusing for early career researchers. Moreover, research is highly competitive. A young scientist pursuing an academic career faces a future of writing applications for fellowships and grants, whilst establishing a strong research track record. This talk is about what you can do for yourself—the learning and coping behaviors and skills that you can cultivate to increase your likelihood of success in academic medicine. Although everyone has a unique path that reflects his or her interests, skills, talents, and environment, effective learning and listening habits can help you achieve your goals and be more successful in whatever career you choose where developing a focus and efficiency and emotional balance are critical. These aspects can bring stress, and there is often no job security. How can one balance one's career, family and social life? Becoming a successful researcher requires strategic and tactical planning worthy of a gladiator.

When:

Friday, April 22nd 2022, 3pm

Where:

Lecture Hall MC4, Med Campus, ground floor, Neue Stiftingtalstrasse 6

How:

Please register until April 15th via mail to doktoratsstudien@medunigraz.at
