

PhD Guest Lecture

Immunopathology in Heart Failure - Can we call it an autoimmune disease yet?

by Dr. Susanne Sattler

Imperial College London

Brief Biography:

Susanne Sattler obtained her PhD from the University of Vienna on immunological properties of endothelial cells. In 2009 she joined Imperial College London as a postdoctoral research associate in the Centre of Complement and Inflammation Research (CCIR). There she developed a keen interest in the regulatory control of immune responses as well as autoimmunity as an inevitable consequence of lacking or aberrant regulatory processes. In 2012, Susanne joined the National Heart and Lung Institute (NHLI) as a member of the Cardiac Regeneration group led by Prof. Nadia Rosenthal. Susanne was promoted to independent Research Fellow in 2017 and now leads the NHLI cardio-immunology team investigating the crosstalk between the adaptive immune system and the heart.

When:

Monday, November 22th 2021, 4pm

Where:

Lecture Hall MC5, Med Campus, ground floor, Neue Stiftingtalstrasse 6

How:

To participate please register until November 17th at doktoratsstudien@medunigraz.at
2-G regulation (vaccinated or recovered) applies!

PhD Program

MOLMED
